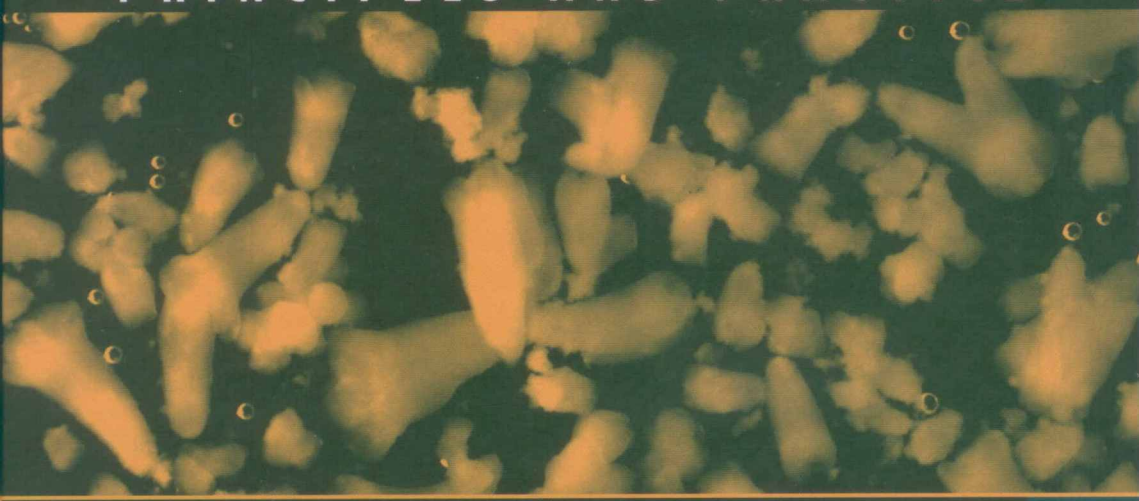
PRINCIPLES AND PRACTICE



Plant Cell and Tissue Culture – A Tool in Biotechnology

Basics and Application

Karl-Hermann Neumann, Ashwani Kumar, Jafargholi Imani

Springer

Contents

1 Introduction 1

2 Historical Developments of Cell and Tissue Culture Techniques 7

3 Callus Cultures 13
- 3.1 Establishment of a Primary Culture from Explants of the Secondary Phloem of the Carrot Root 16
- 3.2 Fermenter Cultures 19
- 3.3 Immobilized Cell Cultures 21
- 3.4 Nutrient Media 22
- 3.5 Evaluation of Experiments 28
- 3.6 Maintenance of Strains, Cryopreservation 29
- 3.7 Some Physiological, Biochemical, and Histological Aspects 31

4 Cell Suspension Cultures 43
- 4.1 Methods to Establish a Cell Suspension 43
- 4.2 Cell Population Dynamics 46

5 Protoplast Cultures 51
- 5.1 Production of Protoplasts 54
- 5.2 Protoplast Fusion 57

6 Haploid Techniques 61
- 6.1 Application Possibilities 61
- 6.2 Physiological and Histological Background 64
- 6.3 Methods for Practical Application 67
- 6.4 Haploid Plants 70

7 Plant Propagation—Meristem Cultures, Somatic Embryogenesis 75
7.1 General Remarks, and Meristem Cultures 75
7.2 Protocols of Some Propagation Systems 83
7.2.1 In vitro Propagation of *Cymbidium* 83
7.2.2 Meristem Cultures of Raspberries 86
7.2.3 In vitro Propagation of *Anthurium* 89
7.3 Somatic Embryogenesis 91
7.3.1 Basics of Somatic Embryogenesis 95
7.3.2 Ontogenesis of Competent Cells 106
7.3.3 Genetic Aspects—DNA Organization 107
7.3.4 The Phytohormone System 113
7.3.5 The Protein System 118
7.3.6 Cell Cycle Studies 127
7.4 Practical Application of Somatic Embryogenesis 130
7.5 Artificial Seeds 134
7.6 Embryo Rescue 135

8 Some Endogenous and Exogenous Factors in Cell Culture Systems 139
8.1 Endogenous Factors 140
8.1.1 Genetic Influences 140
8.1.2 Physiological Status of "Mother Tissue" 140
8.1.3 Growth Conditions of the "Mother Plant" 143
8.2 Exogenous Factors 145
8.2.1 Growth Regulators 146
8.2.2 Nutritional Factors 148
8.3 Physical Factors 158

9 Primary Metabolism 161
9.1 Carbon Metabolism 161
9.2 Nitrogen Metabolism 176

10 Secondary Metabolism 181
10.1 Introduction 181
10.2 Mechanism of Production of Secondary Metabolites 183
10.3 Historical Background 186
10.4 Plant Cell Cultures and Pharmaceuticals, and Other Biologically Active Compounds 190
10.4.1 Antitumor Compounds 194
10.4.2 Anthocyanin Production 199
10.5 Strategies for Improvement of Metabolite Production 202
10.5.1 Addition of Precursors, and Biotransformations 203
10.5.2 Immobilization of Cells 205

10.5.3 Differentiation and Secondary Metabolite Production ... 206
10.5.4 Elicitation ... 208
10.6 Organ Cultures ... 210
10.6.1 Shoot Cultures ... 210
10.6.2 Root Cultures ... 211
10.7 Genetic Engineering of Secondary Metabolites ... 212
10.8 Membrane Transport and Accumulation of Secondary Metabolites ... 215
10.9 Bioreactors ... 219
10.9.1 Technical Aspects of Bioreactor Systems ... 221
10.10 Prospects ... 225

11 Phytohormones and Growth Regulators ... 227

12 Cell Division, Cell Growth, Cell Differentiation ... 235

13 Genetic Problems and Gene Technology ... 249
13.1 Somaclonal Variations ... 249
13.1.1 Ploidy Stability ... 249
13.1.2 Some More Somaclonal Variations ... 252
13.2 Gene Technology ... 258
13.2.1 Transformation Techniques ... 258
13.2.2 Selectable Marker Genes ... 265
13.2.3 β-Glucuronidase (GUS) ... 268
13.2.4 Antibiotics Resistance Genes ... 270
13.2.5 Elimination of Marker Genes ... 272
13.2.6 *Agrobacterium*-Mediated Transformation in Dicotyledonous Plants ... 275
13.2.7 *Agrobacterium*-Mediated Transformation in Monocotyledonous Plants ... 282

14 Summary of Some Physiological Aspects in the Development of Plant Cell and Tissue Culture ... 287

15 Summary: Applications of Plant Cell and Tissue Culture Systems ... 291

References ... 295
