

# CONTENTS

<b>Preface and Acknowledgments</b>	<b>ix</b>
<b>Chapter 1. Plant Canopy Architecture</b>	<b>1</b>
Introduction	1
Plant Height	5
Tillering	8
Leaf Characteristics	12
Breeding and Management Strategies for Ideal Plant Architecture	15
Conclusion	21
<b>Chapter 2. Root Architecture</b>	<b>23</b>
Introduction	23
Root Morphology	24
Shoot-Root Ratios	27
Root Growth Parameters and Methods of Measurement	29
Root Distribution in Soil	32
Root Development Relative to Plant Growth Stage	33
Root Characteristics Related to Drought Resistance	37
Soil Environment	37
Management Strategies for Maximizing Root Systems	56
Conclusion	59
<b>Chapter 3. Physiology of Growth and Yield Components</b>	<b>61</b>
Introduction	61
Theory of Growth and Yield Components Analysis	62
Yield Components Analysis	65
Dry Matter Production and Grain Yield	72
Duration of Reproductive Growth Period	82
Duration of Grain-Filling Period	84
Management Strategies for Ideal Yield Components	88
Conclusion	92

<b>Chapter 4. Photosynthesis and Crop Yield</b>	<b>95</b>
Introduction	95
Crop Photosynthesis	96
Canopy Photosynthesis	98
C <sub>3</sub> and C <sub>4</sub> Photosynthesis	101
Radiation Use Efficiency	102
Leaf Area Index	106
Partitioning of Assimilates	109
Respiration During Photosynthesis	111
Management Strategies for Maximizing Photosynthesis	112
Conclusion	115
<b>Chapter 5. Source-Sink Relationships and Crop Yield</b>	<b>117</b>
Introduction	117
Source-Sink Transitions	119
Physiological Aspects of Source-Sink Relationships in Annual Crop Plants	120
An Example of Yield Manipulation Using Source-Sink Concepts Relative to Nitrogen and Crop Development	123
Relationship Between Sink and Respiration	125
Formation of Yield Sinks	126
Modification in Source-Sink Relationships with Cultivar Improvement	127
Management Strategies for Maximizing Source-Sink Relationships	128
Conclusion	129
<b>Chapter 6. Carbon Dioxide and Crop Yield</b>	<b>131</b>
Introduction	131
Total Carbon in Soils of the World	136
Carbon Dioxide and Plant Growth	138
Carbon Dioxide and Photosynthesis	140
Carbon Dioxide and Water Use Efficiency	141
Carbon Dioxide and Radiation Use Efficiency	142
Management Strategies in Sequestration of CO <sub>2</sub>	143
Conclusion	145

<b>Chapter 7. Physiology of Drought in Crop Plants</b>	<b>149</b>
Introduction	149
Water Use Efficiency	153
Crop Yield Relative to Water Stress	155
Drought and Nutrient Acquisition	164
Drought Resistance Mechanisms	165
Management Strategies for Reducing Drought	175
Conclusion	182
<b>Chapter 8. Physiology of Mineral Nutrition</b>	<b>185</b>
Introduction	185
Root Morphology	194
Active and Passive Ion Transport	197
Ion Uptake Mechanisms	198
Ion Absorption Measurement	203
Ion Translocation from Roots to Shoots	204
Physiological Functions of Nutrients	206
Beneficial and Toxic Elements	252
Conclusion	257
<b>Appendix. Plant Species</b>	<b>261</b>
<b>References</b>	<b>263</b>
<b>Index</b>	<b>335</b>
